

AMENDMENTS TO THE ABSTRACT

Please replace the Abstract with the following amended paragraph:

A data broadcast receiving apparatus includes a storage controlling unit and a reproduction controlling unit. The storage controlling unit ~~selectively~~ stores data modules among a plurality of data modules included in received broadcast data, into a module storing unit. ~~The storage controlling unit~~ and also stores storage information for each of the plurality of data modules into a storage information storing unit, the storage information showing the presence or absence of the data module in the module storing unit, a reason of the absence of the data module, and the like. When the user selects a data module as a reproduction target, the reproduction controlling unit judges whether the data module is stored ~~in the module storing unit~~, based on storage information of the data module ~~in the storage information storing unit~~. If the ~~data module is stored in the module storing unit, the reproduction controlling unit reads the data module and produces a display corresponding to the data module on a TV screen.~~ If the data module is not stored ~~in the module storing unit~~, the reproduction controlling unit displays a message informing the user of the fact and reason that the data module is not stored ~~in the module storing unit~~.
